

10-second dataset. 50.0% of the episodes before the test period are volatile by construction; the test set is 29.6% (4,559 calm, 1,915 volatile)

same rule, other versions: 0.001638 (1-minute), 0.000891 (10-second, shorter episode).
A shorter episode accumulates less price movement, so its threshold is lower
