

An apparent edge that a broken agent also produces is a property of the period, not skill

cost vs TWAP (bps) [below the line = cheaper]

Every agent flips sign: 28 of 30

1 collapsed DQN seed off-scale
(+2.94 to +4.34 bps, same direction)

worse than TWAP

cheaper than TWAP

validation
(earlier period)

sealed test
(later period)

—●— PPO agents (15 runs)

—●— DQN agents (15 runs; behaviourally collapsed)

---- TWAP

DQN is a diagnosed-broken learner
and it also flips to cheaper on the test period
